Biotech: Interface Between Industry and University

Paul Yock, *Stanford University*

January 22, 2003

Video URL: <http://ecorner.stanford.edu/videos/439/Biotech-Interface-Between-Industry-and-University>

Yock talks about the interface between the universities and the industry. He talks about the rich MedTech environment at Stanford and other universities.

Transcript

And like in hardware and software, this is nice interface between the universities and the industry. So I like the slide because it showcases Stanford's productivity. This is for all biomedicine. This is slide from the California Healthcare Institute that talks about the number of spinoffs coming from different universities, and we count just in the MedTech sector, we count 50 faculty and students whose inventions have been the pivotal invention for a MedTech company. And this is partial listing of some of those companies that have come out of Stanford. So we have an incredibly rich environment here on the MedTech side as well.
